

## Carole Park Wastewater Centre

Boundary Road, Carole Park Q 4300

The Carole Park Wastewater Centre presently services an equivalent population of 26 000 from Carole Park and Camira, with an operational capacity of 26 000.

Stages 1 and 2 were constructed in 1971 and 1978 respectively and utilise a conventional activated sludge treatment process in purifying wastewater.

Stage 3, constructed in 1995, utilises **biological nutrient reduction (BNR)**. This is a proven method of removing harmful nutrients using naturally occurring micro-organisms, ensuring consistent regulatory compliance of water quality.

The Carole Park Wastewater Centre provides recycled water to the Gales, Wolston Park and Brookwater golf courses for irrigation purposes. Further the centre is presently undergoing construction to soon become a tanker filling point for the provision of Class B recycled water. Ipswich Water's recycled water initiative aims to encourage the use of this valuable alternative water source where it is 'fit for purpose' for sustainable business and industry practices.

### Organised visits and school excursions

We offer organised visits and school excursions to our wastewater centres. For more information contact Ipswich Water.
